DATA SCIENCE CLUB

# **ABOUT**

The Data Analytics Club at Lincoln University is designed to support and improve the skill development of both bachelor and master's students interested in data knowledge on an extracurricular basis. The LU DAC conducts workshops every two weeks including SQL (Structured Query Language), Python for Data Analytics (NumPy, Pandas, Matplotlib, Seaborn, Plotly & Clufflinks, and Geographical Plotting Libraries), Probability and Statistics, Tableau (analyzing and visualizing dashboards) and Microsoft Power BI (reporting).

The main aim of the club is to help LU students to use online sources effectively to learn the data analytics tools based on self-study. In this club, data enthusiastic students will have the best opportunity to collaborate with other interested students and access to data-related internships and jobs.
